

**Michelle Anthony, Oxygen**

I have spent the past 9 years as the Head of Development for Oxygen Asset Management – Responsible for the management and delivery of a diverse range of building projects ranging from CATB fast track fitouts through to out the ground office development.

I am currently responsible for over £200mil pound of Capital expenditure, working with a wide range of consultants, Corporate occupiers and funders. I Joined the Mentoring committee for the BCO in 2021. I am passionate about the built environment and believe investment in people and teams is at the core to the success of our industry going forward.

Our industry is based on long term relationships up stream and down stream. The Mentoring programme is a fantastic opportunity to share our experience, with the next generation and to also learn what we can do better as an industry for future generations. Technical, strategic, personal coaching whatever you want from the programme we have the people to support you on your journey in the built environment
